# Global Medium Range Meteorological Forecasting in AI-Model

Makes predictions for wind, temperature, humidity, geopotential as well as TCs

Global Medium Range Meteorological Forecasting in AI-Model

Anomaly correlation of 144th hour weather forecasts for T850 from AI models and ECMWF's operational model(IFS) in 2022.

Anomaly correlation for next 10 days weather forecasts for H500 from AI models and ECMWF's operational model(IFS) in 2022.

Prediction Ability and the available forcast time Exceed ECMWF(IFS)

Data-driven AI Models in NMC/CMA

Three data-driven weather forecasting models are real time running in CMA

- **Pangu-Weather (Huawei)**
  CMA National Meteorological Centre from Dec 2022

- **Fengwu (Shanghai Artificial Intelligence Laboratory)**
  CMA National Meteorological Centre-from July 2023
  Shanghai Meteorological Bureau-from July 2023

- **Fuxi (Fudan University)**
 CMA National Meteorological Centre-from July 2023

**Real-time diagnosis and analysis application platform for data-driven AI models**

Realtime evaluation platform for
Data-driven AI models

Data-driven AI Models in NMC/CMA

Data-driven AI Models in NMC/CMA

Tracks of TCs over the WNP and the South China Sea from 1st January to 31th October 2023.

landfall TCs

预报检验

Track Error:

○ Within a 24-hour forecast period, Pangu-Weather and FengWu are comparable to or slightly worse than the European deterministic level.

○ For forecast periods of 36 hours and beyond, Pangu-Weather and FengWu have errors smaller than the ECMWF-IFS.

○ Overall, Pangu-Weather has the best path forecasting ability, while FuXi has the largest forecast error.

2023 Typhoon Track Forecast Error
移速偏差：

Along Track Error（ATE）：

○ Pangu-Weather and FuXi underestimate the typhoon's speed, while the ECMWF-IFS and FengWu exhibit the opposite.

○ Pangu-Weather reflects the speed of movement the best, while FuXi shows a larger deviation in speed.

Along Track Error

移向偏差：

Cross Track Error（CTE）：

- Before 60 hours lead times, the track forecast tends to veer left; after 84 hours, the track forecast consistently veers right.
- For 72 hours and longer lead times, the track forecasts of the three large models are superior to those of the ECMWF-IFS.
- Fuxi's track forecast has the smallest deviation in direction on both sides of the typhoon's track.

Cross Track Error
## 2023 Typhoon Track Forecast Mean Absolute Error (Average of all Lead Times)

TCID	NAME	MAX INTENSITY (m/s)	LIFE TIME (day)	ECMWF	Pangu-Weather	FengWu	FuXi
2301	Sanvu	23	2				
2302	Mawar	68	13	165	137	**93**	
2303	Guchol	40	7	254	124	**114**	
2304	Talim	40	3				
2305	Doksuri	62	8	125	**119**	139	94
2306	Khanun	52	15	152	183	**103**	123
2307	Lan	55	9	**101**	143	183	163

Wind Speed (m/s)

2023/08/29-2023/08/29 (海葵)

■ EC ■ PanGu

TRACK Error (km) vs Lead Time (h)

| Lead Time (h)	EC	PanGu
24	127	121
48	430	54
72	732	35
96	1012	171
120	1640	530

EC model predicted the subtropical high much than weak then ERA5, but Pangu model predicted much stonger. The track error is large than Pangu. EC predicted HAIKUI move northwestward, Pangu predicted better for the moving direction, but the moving speed is much slower, and has less track errors.

Shortage

## 2023 Typhoon Intensity Forecast Error
Intensity Error:

○ Pangu-Weather, FengWu, and FuXi are all significantly inferior to the major mainstream models such as ECMWF-IFS, showing a clear systematic underestimation in typhoon intensity forecasting.
Next generation of AI-model development

Based on the meteorological model, the development of fine-tuning models based on CRA40 and can improve the forecast performance for 1-5 days

Maximum available time up to 10.0 days.

Spectral mode multiscale decomposition
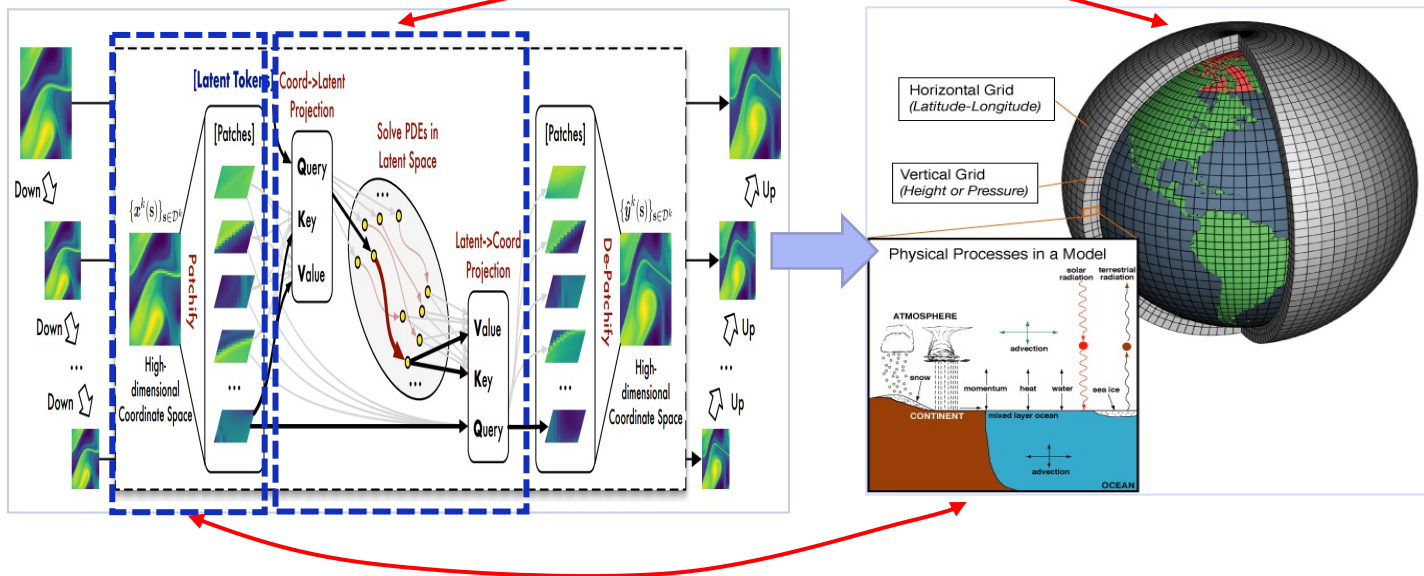

Improving Strength Prediction through Physical Process Mechanisms

Continuous plan for
AI for typhoon forecast Application

- **Goals**
  - Improve the typhoon forecasting with AI to support the EW4ALL Initiative
  - Comprehensively Evaluate AI's potential for typhoon forecasting
  - Provide operational AI-driven Typhoon Forecasting Tools

- **Expected Outcomes**
  - AI-enhanced typhoon Prediction Tools and Products, including ensemble and deterministic typhoon forecast products
  - Comprehensive Report on AI for typhoon prediction

Thanks a lot for your listening!
